#### **Description**

KOBOLD rotating vane flowmeters series DRG are used for measuring and monitoring low viscous liquids.

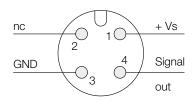

Series DRG flowmeters are working according the well-known rotating vane principle. A magnet fitted in the vane and hermetically sealed from the medium transfers non-contacting the rotary motion to a Hall-effect sensor mounted in the housing. The sensor converts the rotary motion which is proportional to the flow to a frequency signal. A series-connected electronics unit converts the signal to an analogue output, limit contacts or display.
