Lower operating ranges with model FN4080

The **FN4070** load cell measures the effort generated on the anchor point of seat belts during crash tests. It has been specifically designed with a replaceable tongue. The load cell can be easily re-used by changing the tongue. It also has a cable output which can be renewed by the crash test technicians to allow for cost-effective, inhouse maintenance of the device.

For other operating ranges (250-500-2500N) refer to model **FN4080**. Consult your MEAS' representative for technical specification.

With many years of experience as a designer and manufacturer of sensors, Measurement Specialties, Inc., often works with customers to design or customize sensors for specific uses and testing environments. To meet your needs we also offer complete turnkey systems. The matched components (sensor, power, amplifier and digital display) are formatted, calibrated and ready for immediate use.
